

COLLAGEN CONSENT FORM

I have had the opportunity to discuss any questions or concerns with my doctor.

I understand that the effects of collagen are not permanent and can last on average 3-4 months, depending on the individual and the areas treated. I can maintain the results by touch up treatments. If I choose not to continue collagen treatments, my skin will return to the state it was prior to the collagen injections.

The side effects were explained to me either by my doctor or from the information brochure, and include, but are not limited to: temporary redness at the injection site, bruising, discomfort during injection, possible lumping of the collagen, as well as the collagen being visible in the skin. Though unlikely, it is possible for the collagen, like any other injected substance to be accidentally placed through a blood vessel. Although this possibility is remote, it could result in blockage of the blood flow to the area. This could result in temporary discoloration and local tissue damage, as well as scab and possible scar.

I also understand that payment for this service, in addition to any other cosmetic service, is expected at the time of treatment.
