

# PATIENT / FAMILY TEACHING SHEET

# **Managing Constipation**

## What is constipation?

- Bowel movements occurring less often than what is the normal pattern
- Hard stool
- Increased difficulty moving bowels

## What to report to the hospice/palliative care team?

- No bowel movement in 2 days or a change in the frequency of bowel movements
- Pain, cramping, tenderness
- A feeling of fullness or bloating
- Blood in stools
- Diarrhea or oozing stools

#### What can be done?

The good news is that there is much you, your caregiver and the hospice/palliative care team can do for constipation. The team will try to discover the underlying cause and discuss treatments best for you.

- Record when the bowel movements have occurred. An example of a <u>Bowel Movement Record</u> is attached to this document and available in the <u>Managing Constipation</u> Teaching Sheet on the HPNA Website at: <a href="http://www.hpna.org/DisplayPage.aspx?Title=Patient/Family%20Teaching%20Sheets">http://www.hpna.org/DisplayPage.aspx?Title=Patient/Family%20Teaching%20Sheets</a>
- Follow a regular bowel regimen, even if you are not constipated (many medications can cause constipation)
  - Drink as much fluid (liquids) as is comfortable. Drinking warm liquids may promote bowel movement
  - Eat more fruits and fruit juices, including prunes and prune juice
  - Increase physical activity if possible. Walking can be beneficial
  - Take laxatives/stool softeners as ordered by healthcare provider
  - Sit upright on toilet, commode or bedpan
  - Establish routine times for toileting
  - Avoid bulk laxatives if not taking enough fluids
- Notify hospice/palliative care team if constipation continues
